

Assignment 1b

Code :

```
<!DOCTYPE html>

<html lang="en">

<head>

    <meta charset="utf-8">

    <title>JavaScript Ajax Get Request</title>

    <script>

        function displayFullName() {

            // Creating the XMLHttpRequest object

            var request = new XMLHttpRequest();

            // Instantiating the request object

            request.open("GET", "greet.php?fname=John&lname=Clark");

            // Defining event listener for readystatechange event

            request.onreadystatechange = function() {

                // Check if the request is complete and was
successful

                if (this.readyState === 4 && this.status === 200) {

                    // Inserting the response from server into an
HTML element
```

```
        document.getElementById("result").innerHTML =
this.responseText;
    }
};
```

```
    // Sending the request to the server
```

```
    request.send();
```

```
    }
```

```
</script>
```

```
</head>
```

```
<body>
```

```
    <div id="result">
```

```
        <p>Content of the result DIV box will be replaced by the
server response</p>
```

```
    </div>
```

```
    <button type="button" onclick="displayFullName()">Display Full
Name</button>
```

```
</body>
```

```
</html>
```

Output:

Hello, John Clark! Welcome to our website.
